

GEOMATICS — DRONES

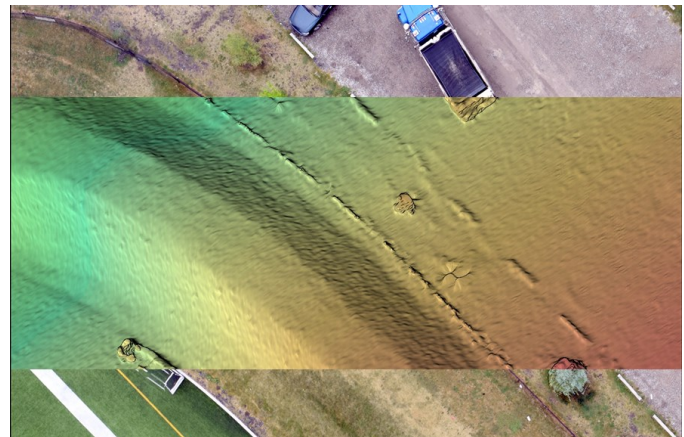

Aerial Survey with Drones

VEGETATION & AS-BUILT SURVEYS

Implementing the use of drones into high level planning provides precision data which can fulfill high quality mapping and aerial survey needs. Woodlands North provides Unmanned Aerial Vehicles (UAV) surveys and integrates outputs with our modeling and data processing capabilities to provide efficient, cost effective, and high quality resolution results.

Woodlands North invests readily in innovative technology to support new and existing projects. UAV surveys are a key asset for reclamation planning, vegetation surveys, volumetric estimates and queries, as well as change detection and monitoring.

High resolution ortho-mosaic and surface model of a football field and associated parking lot conducted with a drone. dddrone.conducted songbird surveys through a great variety of habitat types and landscapes across APL's FMA.
