

WEB & MOBILE APP DEVELOPMENTS

INTEGRATED SOLUTIONS FORM DATA COLLECTION TO REPORTING

ADAPTIVE RESPONSE!

We have experience in database management and programming and web reporting. Being cognizant of field data collection needs and requirements, allows us to understand projects holistically with an end goal in mind.

We strongly believe on active maintenance where ongoing scaling, refinement and app updates are provided even after project closure.

The successful projects on our portfolio include either standalone applications or works in synergy with web interface. These applications utilize:

- location awareness,
- customized forms,
- ability to work both on and offline, and may associate complex relationships.

Mobile applications has been developed at Woodlands North for seamless and accurate data collection. The app also works offline and sync data to servers.
